

4 Steps to create a HIL Academy Course

1

Define the instructor and course overview

Identify the course topic and the target-audience considering your area of expertise. In this step, it is important to clearly communicate the pre-requisites (starting point) and the desired course outcomes (vision of success).

2

Define the course structure

Create the course syllabus and define the format and methodology that will best guide the target audience to achieve the desired course outcomes.

3

HIL Academy Course Proposal

Fill and submit the HIL Academy Course Proposal template. Our technical content managers will evaluate the proposal and provide constructive feedback aiming to create the best experience possible for you and your learners.

4

Course Production

Once the template is approved, the course is ready for production. Our production team is available to help you throughout the entire process.

Building content partners

Creating courses with HIL Academy is partnering with HIL Academy. We are proud to partner with instructors who believe that the power of knowledge is the only true equalizer. Apply to join passionate instructors, share your knowledge, and take part in transitioning our planet to a sustainable energy future!
